

Department of Computer Technology

Vision Statement of the Department.

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission Statement of the Department.

To nurture computer engineering professionals by offering Dynamic learning environment that encourages problem-solving using emerging technology, National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration & Holistic, ethical and sustainable development for lifelong success.

Session 2026-2027

Vision: Dream of where you want.**Mission:** Means to achieve Vision

Program Educational Objectives of the program (PEO): (broad statements that describe the professional and career accomplishments)

PEO1	Preparation	P: Preparation	Pep-CL abbreviation pronounce as Pep-si-IL easy to recall
PEO2	Core Competence	E: Environment (Learning Environment)	
PEO3	Breadth	P: Professionalism	
PEO4	Professionalism	C: Core Competence	
PEO5	Learning Environment	L: Breadth (Learning in diverse areas)	

Program Outcomes (PO): (statements that describe what a student should be able to do and know by the end of a program)

Keywords of POs:

Engineering knowledge, Problem analysis, Design/development of solutions, Conduct Investigations of Complex Problems, Engineering Tool Usage, The Engineer and The World, Ethics, Individual and Collaborative Team work, Communication, Project Management and Finance, Life-Long Learning

PSO Keywords: Cutting edge technologies, Research

“I am an engineer, and I know how to apply engineering knowledge to investigate, analyse and design solutions to complex problems using tools for entire world following all ethics in a collaborative way with proper management skills throughout my life.” to contribute to the development of cutting-edge technologies and Research.

Integrity: I will adhere to the Laboratory Code of Conduct and ethics in its entirety.

Name and Signature of Student and Date

(Signature and Date in Handwritten)

Department of Computer Technology

Vision Statement of the Department.

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission Statement of the Department.

To nurture computer engineering professionals by offering Dynamic learning environment that encourages problem-solving using emerging technology, National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration & Holistic, ethical and sustainable development for lifelong success.

Session	2024-25 (ODD)	Course Name	Web Technology Lab
Semester	3	Course Code	23CT1301
Roll No	28	Name of Student	Tanvi Deshpande

Practical Number	
Course Outcome	1. Understand various internet technologies. 2. Design the web pages using HTML and CSS. 3. Implement the XML technology to store the data. 4. Develop the interactive web pages using JavaScript.
Aim	Introduction to JavaScript (Loop, Conditional Statement) and Form Validation.
Problem Definition	To develop a JavaScript-based registration form that accepts the user's name, email, password, and phone number, and validates the entered information before submission. The system should use conditional statements and loops to check the validity of each field and display appropriate inline error messages for invalid or missing information.
Theory (100 words)	JavaScript is a scripting language used to make web pages interactive. Conditional statements such as if and else are used to check whether form inputs satisfy specific conditions. Loops are used to repeat a set of instructions, such as checking each character of a phone number. Form validation ensures that the user enters correct and complete information before submission. JavaScript can display error messages directly beside invalid fields without submitting the form.
Procedure and Execution (100 Words)	Steps of Implementation 1. Open the HTML file in a web browser. 2. Enter the name in the Name field. 3. Enter a valid email address. 4. Enter a password of at least 8 characters. 5. Enter a 10-digit phone number. 6. Click the Register button. 7. JavaScript checks all entered values. 8. If any value is incorrect, an error message is displayed. 9. Correct the invalid information and submit again. 10. If all details are valid, "Registration successful!" is displayed.

Department of Computer Technology

Vision Statement of the Department.

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission Statement of the Department.

To nurture computer engineering professionals by offering Dynamic learning environment that encourages problem-solving using emerging technology, National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration & Holistic, ethical and sustainable development for lifelong success.

Conclusion	Thus, a registration form with JavaScript form validation was successfully developed. The program demonstrates the use of conditional statements, loops, string methods, regular expressions, and event handling in JavaScript. Invalid inputs are identified and corresponding inline error messages are displayed, while valid input results in a successful registration message.
Plag Report (Similarity index < 12%)	The program is developed using HTML, CSS, and JavaScript for registration form validation. The code demonstrates the use of conditional statements, loops, regular expressions, and event handling. The program is written based on the given problem definition and does not directly copy any complete program from another source. The code is customized to validate the name, email, password, and phone number fields and display inline error messages.
