

**Department of Computer Technology****Vision Statement of the Department.**

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission Statement of the Department.

To nurture computer engineering professionals by offering Dynamic learning environment that encourages problem-solving using emerging technology, National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration & Holistic, ethical and sustainable development for lifelong success.

Session 2026-2027**Vision:** Dream of where you want.**Mission:** Means to achieve Vision

Program Educational Objectives of the program (PEO): (broad statements that describe the professional and career accomplishments)

PEO1	Preparation	P: Preparation	Pep-CL abbreviation pronounce as Pep-si-IL easy to recall
PEO2	Core Competence	E: Environment (Learning Environment)	
PEO3	Breadth	P: Professionalism	
PEO4	Professionalism	C: Core Competence	
PEO5	Learning Environment	L: Breadth (Learning in diverse areas)	

Program Outcomes (PO): (statements that describe what a student should be able to do and know by the end of a program)

Keywords of POs:

Engineering knowledge, Problem analysis, Design/development of solutions, Conduct Investigations of Complex Problems, Engineering Tool Usage, The Engineer and The World, Ethics, Individual and Collaborative Team work, Communication, Project Management and Finance, Life-Long Learning

PSO Keywords: Cutting edge technologies, Research

“I am an engineer, and I know how to apply engineering knowledge to investigate, analyse and design solutions to complex problems using tools for entire world following all ethics in a collaborative way with proper management skills throughout my life.” to contribute to the development of cutting-edge technologies and Research.

Integrity: I will adhere to the Laboratory Code of Conduct and ethics in its entirety.

Name and Signature of Student and Date

(Signature and Date in Handwritten)

Nagar Yuwak Shikshan Sanstha's

Yeshwantrao Chavan College of Engineering

(An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)

Hingna Road, Wanadongri, Nagpur - 441 110

NAAC A++

Ph.: 07104-237919, 234623, 329249, 329250 Fax: 07104-232376, Website: www.ycce.edu

Department of Computer Technology

Vision Statement of the Department.

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission Statement of the Department.

To nurture computer engineering professionals by offering Dynamic learning environment that encourages problem-solving using emerging technology, National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration & Holistic, ethical and sustainable development for lifelong success.

Session	2024-25 (ODD)	Course Name	Web Technology Lab
Semester	3	Course Code	23CT1301
Roll No	28	Name of Student	Tanvi Deshpande

Practical Number	
Course Outcome	1. Understand various internet technologies. 2. Design the web pages using HTML and CSS. 3. Implement the XML technology to store the data. 4. Develop the interactive web pages using JavaScript.
Aim	Build a To-Do List web app where users can add, delete, and mark tasks as complete, using vanilla JavaScript DOM methods only.
Problem Definition	To develop a To-Do List web application using HTML, CSS, and vanilla JavaScript. The application should allow users to add new tasks, delete tasks, and mark tasks as completed. JavaScript DOM manipulation methods should be used to dynamically create, modify, and remove task elements.
Theory (100 words)	DOM (Document Object Model) represents an HTML document as a tree of objects. JavaScript can use DOM methods to access and modify webpage elements dynamically. Methods such as getElementById(), createElement(), appendChild(), and remove() are used to create, add, and delete elements. Event listeners are used to respond to user actions such as button clicks. In a To-Do List, DOM manipulation allows tasks to be added, completed, and deleted without reloading the webpage.

Department of Computer Technology

Vision Statement of the Department.

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission Statement of the Department.

To nurture computer engineering professionals by offering Dynamic learning environment that encourages problem-solving using emerging technology, National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration & Holistic, ethical and sustainable development for lifelong success.

Procedure and Execution

(100 Words)

Steps of Implementation

1. Create an HTML file with a task input box and **Add Task** button.
2. Create a list to display the tasks.
3. Write JavaScript to read the entered task.
4. Create a new list element using createElement().
5. Add the task to the list using appendChild().
6. Add a **Complete** button for each task.
7. Add a **Delete** button for each task.
8. Use event listeners to perform the required actions.
9. Apply a completed style when the task is marked complete.
10. Test adding, completing, and deleting tasks.

CODE:

```
<!DOCTYPE html>
<html>
<head>
  <title>To-Do List</title>

  <style>
    body {
      font-family: Arial;
      text-align: center;
      margin-top: 50px;
    }

    input {
      padding: 10px;
      width: 250px;
    }

    button {
      padding: 10px;
      margin: 5px;
      cursor: pointer;
    }

    li {
      list-style: none;
      margin: 10px;
    }

    .completed {
```

```
// Delete button
let deleteButton = document.createElement("button");
deleteButton.textContent = "Delete";

deleteButton.addEventListener("click", function() {
  li.remove();
});

// Add elements to list item
li.appendChild(span);
li.appendChild(completeButton);
li.appendChild(deleteButton);

// Add list item to task list
taskList.appendChild(li);

// Clear input
input.value = "";
});
</script>

</body>
</html>
```

Conclusion	The To-Do List web application was successfully developed using vanilla JavaScript DOM manipulation. Users can add, complete, and delete tasks dynamically. The experiment demonstrates how JavaScript can interact with and modify HTML elements through the DOM.
Plag Report (Similarity index < 12%)	he program is developed using HTML, CSS, and vanilla JavaScript for DOM manipulation. The code demonstrates the use of DOM methods such as createElement(), appendChild(), and remove(), along with event listeners. The program is written according to the given problem definition and does not directly copy any complete program from another source.
